SUMMARY

Software Engineer with a little over 2 years of experience building and shipping client products at a services company. I mostly work with Node.js, TypeScript, React and Next.js on PostgreSQL, MongoDB, Redis and AWS, and I also build agentic AI features with LangChain, LangGraph and RAG. I have delivered ten client projects across AI, biotech, events, ecommerce and messaging, usually owning them from architecture through to deployment, and I also have backend experience in Java with Spring Boot and Kafka.

SKILLS

Languages: JavaScript, TypeScript, Java

Frontend: React.js, Next.js, TanStack Query, TanStack Router, Redux, Tailwind CSS, ShadCN UI, Ant Design, React Hook Form, Zod

Backend: Node.js, Express, Fastify, Prisma, Mongoose, REST APIs, WebSocket, Microservices, Spring Boot, Spring WebFlux

Databases and Messaging: PostgreSQL, MongoDB, MySQL, Redis, DynamoDB, Kafka, RabbitMQ, BullMQ

AI: LangChain, LangGraph, Advanced RAG, Qdrant, Cohere, MCP, Amazon Bedrock, multiple LLM providers, agent evaluation with TruLens

Cloud and DevOps: AWS (EC2, S3, Lambda, Cognito, Amplify, SNS, IAM, Route 53, Lightsail), Docker, GitHub Actions, Jenkins, Nginx, Grafana, Loki, PM2, Linux, Bash

Auth and Security: JWT, Keycloak, TOTP MFA, RBAC, multi tenant data isolation, signed request authentication

Tools: Git, GitHub, Postman, Swagger, Figma, Claude Code, Cursor

EXPERIENCE

Junior Software Engineer

Sep 2024 to Present

Leadows Technologies Private Limited, Nagpur

- Build and ship client products end to end, mostly on Node.js, TypeScript, React and Next.js, with Java and Spring Boot for some backend systems. Delivered ten client projects in two years.
- Own CI/CD and deployments for MyNeuron, Crikify, Twine and GridInsight across AWS EC2, Amplify and Google Cloud Run, with Docker, PM2, Nginx and Grafana with Loki. Moved DNS for all client domains to Route 53 and wrote Bash scripts for staging deploys.

Trainee Software Engineer

Jul 2024 to Sep 2024

Leadows Technologies Private Limited, Nagpur

- An RCS and SMS messaging client ran around 13 microservices with no public endpoints and needed to open a controlled set to partner organizations. Built a separate API key authenticated gateway from scratch in Node.js, TypeScript and Fastify, and delivered around 200 production endpoints in 6 weeks.

CLIENT PROJECTS

1SPOC, Agentic AI Pre Sales Platform

Live: <https://www.1spoc.com>

Node.js, React, TypeScript, PostgreSQL, Prisma, LangChain, Advanced RAG, Qdrant, Cohere, MCP, AWS S3

- White label platform for a teleservices client that lets businesses build their own AI agents for support, appointment booking and ecommerce through a no code, form based builder.
- Built the RAG pipeline builder that handles chunking, embedding and retrieval from each organization's knowledge base, along with the tool creation system and the agent builder UI and APIs.
- Built a separate evaluation server that generates test questions and expected answers for every agent automatically, then scores it with TruLens on context relevance, groundedness, answer correctness, tool selection and plan quality before the agent goes live.

MyNeuron, Biotech and Omics Community Platform

Live: <https://myneuronworld.com>

React, TypeScript, Node.js, PostgreSQL, Prisma, Redis, BullMQ, TanStack Query, AWS S3, EC2, Amazon Bedrock

- Built a LinkedIn style community platform for biotech researchers from requirements and sprint planning through to delivery. Architected PlasmaAI, a literature search feature on Amazon Bedrock with the Biomni agent. Handled its research and deployment on EC2 with Bedrock AgentCore, and built the WebSocket API for real time chat with the agent.
- Designed Impulse, the social feed module, covering UI, API structure, auth and state management, plus a document vault using pre signed S3 uploads. The platform took a large surge of new users on its first day of public launch without issues.

Crikify, Cricket Tournament Management App

Live: <https://www.crikify.com>

React Native (Expo), RxDB, Node.js, TypeScript, Express, Prisma, MySQL, Redis, BullMQ, Razorpay

- Owned the architecture end to end for an offline first app used at turf venues with poor internet, covering tournaments, teams, scoring, player stats and live score updates through polling. Used RxDB so every edit stays on the device and syncs once the connection returns.
- Added public and private key signed request authentication with one active session per user. Integrated Razorpay with Redis and BullMQ for background jobs, and handled the release to both the Play Store and the App Store myself.

Twine, Omics Research Platform

Live: <https://twine.myneuron.in/home>

React, TypeScript, AWS Cognito, IAM, S3, Lambda, SNS, DynamoDB, Amplify

- Built a serverless architecture where the frontend calls S3, Lambda and other AWS services directly through Cognito identity pools and IAM roles, so no backend relay layer was needed.
- Enabled direct browser to S3 uploads for files of 30 GB and more, avoiding around 30% extra cost compared to routing them through a backend. Delivered the MVP in 2 months for a fixed event launch date.

GridInsight, Energy Analytics Platform

Live: <https://volt.grid-insight.com/login>

Next.js, TypeScript, ShadCN UI, Tailwind CSS, Recharts, FastAPI, MongoDB, Google Cloud Run

- Sole frontend developer on a platform that reads uploaded electricity bills to build an energy profile and solar recommendations. Built data heavy screens from complex Figma designs with custom Recharts visualizations and live calculations, delivered the MVP in 2 months, and later worked on the backend as well.

Punekar Cotton, Warehouse Management System

MongoDB, Express, React, Node.js, Flutter

- Added return to origin detection to the Shiprocket webhook pipeline and fixed duplicate order bugs in ingestion that handles over 2,000 orders a day. Built a barcode scan step in the packer app that stopped duplicate shipments.

Multi Tenant CRM and Operations Platform for the Events Industry

Java, Spring Boot, Spring WebFlux, Apache Kafka, PostgreSQL, Redis, AWS S3, Keycloak

- Built a multi tenant CRM that replaced a client's Excel workflow and is rented to event companies on subscription. Owned the Kafka campaign and webhook services, Keycloak auth, and WhatsApp Cloud API messaging with SMS fallback.
- Spotted that peak season campaigns of 200 to 5,000 invitations would take around 30 minutes each, and led a Java 17 to 21 migration to prevent it, finished in 2 hours with no breaking changes.

White Label Business ERP Platform

Java, Spring Boot, Spring Security, React, TypeScript, PostgreSQL 17, Redis

- Built the core infrastructure of an HRMS, payroll and asset ERP that wholesale clients rent to retailers under their own brand: JWT and TOTP login, Spring Security RBAC, rate limiting, Redis caching, S3 storage and SMTP per reseller. Also set up the React architecture all feature modules were built on.

Employee Upskilling and Certification Platform

Java, Spring Boot, React, TypeScript, PostgreSQL, Redis, AWS S3, JWT, Google APIs

- Took over a partly AI generated codebase for a teleservices client, refactored it and improved performance with virtualization, lazy loading and memoization. Moved JWT from localStorage to HTTP only cookies with refresh tokens.
- Built a certification module with timed exams, tab switch detection and single session attempts, and a training system on the Google Meet, Calendar and Gmail APIs that schedules sessions, marks attendance and archives recordings.

PERSONAL PROJECTS

Incident Management System

React, TypeScript, Vite, TanStack Query, ShadCN, Zod, Node.js, Express, Prisma, SQLite, Docker

Live: <https://incidenthub.shivamingale.com> | Code: <https://github.com/Shivamingale3/incident-management-system>

- Built in 2 days as a take home assessment with a layered SOLID architecture and a provider independent AI layer (OpenAI, Gemini or Groq) for severity suggestion and summaries.

Cloudlet, Self Hosted Object Storage

MongoDB, Express, React, Node.js, Docker, S3 API

Live: <https://cloudlet.shivamingale.com> | Code: <https://github.com/Shivamingale3/cloudlet>

- A self hosted file storage service that replicates the core of S3 and MinIO style object storage.

EDUCATION AND CERTIFICATION

MCA, Dr. D. Y. Patil Institute of Management and Research, Pune | CGPA 7.86, First Class with Distinction 2022 to 2024

BCA, Kamla Nehru College, Nagpur | 76.66%, First Class with Distinction 2019 to 2022

Certification: Foundations of Prompt Engineering, AWS Skill Builder
